Dark Pools Cybersecurity

Penetration test report

Technical report and executive summary

Specimen: report structure only, no data

SPECIMEN

Client	
Engagement reference	
Test type	
Testing window	
Version	
Date issued	
Distribution	

Produced as PDF. Section names, table columns and cover fields are those the report uses.

Executive summary

For leadership and auditors: overall risk, the findings that matter most and what to fix first.

Findings by severity

Severity	Findings	Closed after retest
Critical		
High		
Medium		
Low		
Informational		

Scope and rules of engagement

Item	Detail
Targets in scope	
Out of scope	
Test type	
Approach (black, gray or white box)	
Testing window	
Rules of engagement	
Emergency contacts	

Methodology

Reconnaissance, manual testing with tooling, and safe exploitation to prove impact. Web and API testing is aligned to OWASP guidance.

Appendix: severity ratings

Severity	CVSS v3.1 base score
Critical (9.0 to 10.0)	
High (7.0 to 8.9)	
Medium (4.0 to 6.9)	
Low (0.1 to 3.9)	
Informational (no score)	

About this specimen

- The report delivered at the end of a penetration test: an executive summary for leadership and auditors, the agreed scope and rules of engagement, every finding with its evidence, business impact and fix, a remediation plan prioritized by business impact, and the retest results once fixes are in.
- Every finding carries reproducible evidence, its business impact and a fix written for the engineers who will apply it.
- Findings use the critical, high, medium, low and informational scale with CVSS scores, so they load straight into Dark Pools vulnerability management.
- Severity follows the CVSS v3.1 qualitative rating scale published by FIRST.
- This specimen shows the report's structure only. It contains no client, case or collection data.
