Analytic Assessment

With the rationale. Where no assessment is made, the report says so and states that the absence of a rating is not a finding of low risk.

About this specimen

- The report Gov AI produces from a collection or investigation: a summary for decision-makers, the collection snapshot, the narratives, actors, claims and events found, an analytic assessment with confidence and risk, and an appendix of every source with its permalink.
- The DOCX version opens with a Contents page.
- Sections without data are left out of the report rather than printed empty.
- This specimen shows the report's structure only. It contains no client, case or collection data.
